

# Who Do You Call When The Lights Go Out?

**Choose Quality, Reliability, and Safety –  
Work with a PEARL Accredited Company for  
Your Electrical Reconditioning Needs**

## Why Choose a PEARL Accredited Company?

PEARL Accredited Companies (PAC) undergo a rigorous, third-party accreditation process to ensure that their technicians, processes, and facilities meet the highest standards for electrical equipment reconditioning. This certification aligns with the ANSI/PEARL Electrical Equipment Reconditioning Standard and the Inspect and Test Standard —standards that ensure reconditioned equipment is safe, reliable, and performs as intended.

## Standards You Can Trust

As an ANSI-accredited standards developer, PEARL has established two comprehensive sets of standards: the ANSI/PEARL Electrical Equipment Reconditioning Standard and the Inspect and Test Standard. These standards have been meticulously developed by third-party engineers, referencing Original Equipment Manufacturer (OEM) guidelines, industry best practices, and internationally accepted standards. When you work with a PEARL Accredited Company, you can trust that your equipment is reconditioned to meet or exceed original specifications.

## Technicians Who Prioritize Quality and Safety

PEARL Accredited Companies also benefit from the PEARL Technician Certification Program, which certifies technicians to the highest levels of quality, safety, and reliability. PAC members are required to have certified technicians on staff, ensuring a commitment to excellence and adherence to strict standards. Through a rigorous "train and certify" approach, PEARL ensures that technicians are not only knowledgeable but also proficient in the skills required for exceptional reconditioning. This program supports consistent quality control, helping to maintain the highest industry standards in reconditioning practices.

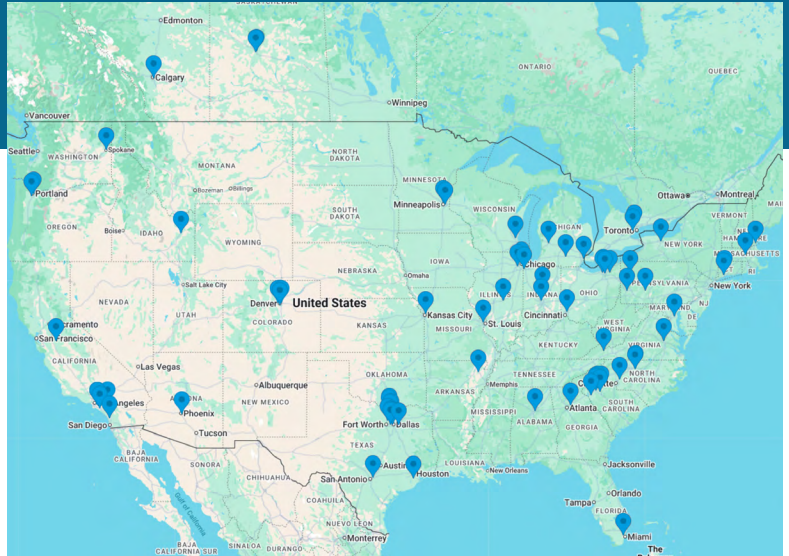

## Strength in Numbers!

PEARL has 75+ members in the United States and Canada

### Addressing Supply Chain Challenges

In an era of supply chain disruptions and extended lead times, reconditioned electrical equipment provides a reliable solution. Partnering with a PEARL Accredited Company allows you to mitigate delays, ensuring your operations remain efficient and uninterrupted.

### Supporting Sustainability and Extending Equipment Lifecycles

Today, many companies are accustomed to replacing equipment with new items as part of a linear economy model. However, reconditioned electrical equipment provides a sustainable solution by extending the lifespan of existing assets, supporting a circular economy approach. PEARL plays an important role in this shift. PEARL advocates for remanufacturing/reconditioning to keep equipment in service for longer—often up to 50+ years with regular maintenance. This not only reduces landfill waste but also creates jobs, promotes financial stability, and protects the environment.

**With a PEARL Accredited Company, you're choosing a partner dedicated to quality, safety, and sustainability—keeping your equipment in peak condition while benefiting the environment.**

## Trust PEARL Accredited Companies for Your Reconditioned Electrical Equipment Needs

The **Professional Electrical Apparatus Reconditioning League (PEARL)** is a national trade organization representing companies that provide top-quality surplus and reconditioned/remanufactured electrical equipment. We are committed to advancing safe reconditioning and remanufacturing practices across the industry.
